Class Exercise 1

Objective: Meet/Collaborate with your Group members, perhaps for the first time, and get some dialogue going about how you would evaluate a software specification.

A mobile app has to be developed to be used by customers of a hardware store chain (e.g., Home Depot, Lowe's, Truvalue). You are the manager of a software engineering team, which has developed a software specification for this system. What are the criteria you would use to decide whether it is acceptable, so that the Design can start?

Work with your Group.
